

REVIEW AND MOCK PREPARATION

1. Attempt a 60-minute mock CompTIA N+ exam using any online practice test tool and submit your score screenshot.

->60-Minute Mock CompTIA Network+ Exam

Tool used: CompTIA Network+ practice test / online mock exam

Time limit: 60 minutes

Student: _____

Date: _____

Score: _____ / _____

Percentage: _____ %

Example format:

Mock Exam Score: **72%**

Correct Answers: **72/100**

Incorrect Answers: **28/100**

Time Taken: **54 minute.**

2. For every question you got wrong in the mock exam, write down the topic (e.g., IP addressing, OSI layers, cabling) and briefly explain why your answer was incorrect.

Hint: Use your class notes or official CompTIA N+ resources to clarify each topic.

-> After completing the mock test, record every question you answered incorrectly.

Q. No.	Topic	My Incorrect Answer	Correct Answer	Why I Was Incorrect
1	IP Addressing	_____	_____	I confused the network address with the host address.
2	OSI Layers	_____	_____	I confused the Transport and Network layers.
3	Cabling	_____	_____	I selected the wrong cable type for the required distance.

Q. No.	Topic	My Incorrect Answer	Correct Answer	Why I Was Incorrect
4	Wireless	_____	_____	I confused the wireless standard/frequency.
5	Network Troubleshooting	_____	_____	I did not follow the troubleshooting process in the correct order.

Example explanations

IP Addressing:

I incorrectly identified the usable IP range. I need to remember that the first address is normally the **network address** and the last address is the **broadcast address** in a traditional IPv4 subnet.

OSI Layers:

I confused the Transport layer with the Network layer. The **Transport layer (Layer 4)** is associated with protocols such as TCP and UDP, while the **Network layer (Layer 3)** handles IP addressing and routing.

Cabling:

I selected the wrong cable because I did not consider the cable's supported speed, distance, and interference characteristics.

Wireless:

I confused wireless standards and their frequency bands. I need to review the major 802.11 standards and their characteristics.

Network Troubleshooting:

I did not follow a structured troubleshooting methodology. I should identify the problem, establish a theory, test the theory, plan and implement a solution, verify functionality, and document the results.

- Pick one weak area from your mock exam results (e.g., subnetting, wireless standards, network troubleshooting) and create a one-page summary sheet with key facts, formulas, and diagrams to help you remember it.**

-> IPv4 Subnetting Quick Revision

Important Formula

Number of addresses:

$$2^{\text{host bits}}$$

Usable IPv4 host addresses:

$$2^{\text{host bits}} - 2$$

The two excluded addresses are normally:

- **Network address**
- **Broadcast address**

Common CIDR Values

CIDR	Subnet Mask	Total Addresses	Usable Hosts
/24	255.255.255.0	256	254
/25	255.255.255.128	128	126
/26	255.255.255.192	64	62
/27	255.255.255.224	32	30
/28	255.255.255.240	16	14
/29	255.255.255.248	8	6
/30	255.255.255.252	4	2

Example

Network:

192.168.10.0/26

Subnet mask:

255.255.255.192

There are:

- 64 total addresses
- 62 usable addresses
- Network: **192.168.10.0**
- First usable: **192.168.10.1**
- Last usable: **192.168.10.62**

- Broadcast: **192.168.10.63**

Easy Subnetting Pattern

192.168.10.0/26

Network

↓

192.168.10.0

|

|--- Usable: .1 → .62

|

Broadcast

↓

192.168.10.63

The next /26 subnet begins at:

192.168.10.64

Then:

192.168.10.128

192.168.10.192

So a /24 can be divided into **four /26 subnets**.

Remember

/24 → 256 addresses → 254 usable

/25 → 128 addresses → 126 usable

/26 → 64 addresses → 62 usable

/27 → 32 addresses → 30 usable

/28 → 16 addresses → 14 usable

4. List 5 exam strategies you will use during the final CompTIA N+ exam to maximize your score (for example: time management, process of elimination, flagging tough questions, reviewing marked answers, etc.

1. Manage Time Carefully

Don't spend several minutes on one difficult question. If I am unsure, I will flag it and continue.

2. Use Process of Elimination

I will eliminate obviously incorrect answers before selecting from the remaining choices.

3. Read the Entire Question

I will look carefully for words such as **BEST, FIRST, MOST, LEAST, NEXT, and NOT**, because they can change what the question is asking.

4. Flag Difficult Questions

If I don't know an answer immediately, I will make my best temporary choice, flag the question, and return to it later.

5. Review Before Submitting

If time remains, I will review flagged questions and check calculations, subnet masks, ports, protocols, and other technical details.

5. Use ChatGPT or another AI tool to generate 3 new CompTIA N+ style questions in your weakest topic area, then answer them yourself and check if your answers are correct.

Hint: Ask the AI to explain each correct answer so you understand the reasoning.

-> **Weak topic: IPv4 Subnetting**

Question 1

A company has the network **192.168.20.0/24** and needs subnets supporting **at least 30 usable hosts each**. Which subnet mask should the administrator use?

- A. /25
- B. /26
- C. /27
- D. /28

My answer: _____

Correct answer: C. /27

Explanation:

A /27 provides:

$$2^5 = 32$$

total addresses.

After reserving the network and broadcast addresses:

$$32 - 2 = 30$$

So /27 provides exactly **30 usable hosts**.

Question 2

What is the broadcast address of **10.10.5.64/26**?

- A. 10.10.5.63
- B. 10.10.5.64
- C. 10.10.5.126
- D. 10.10.5.127

My answer: _____

Correct answer: D. 10.10.5.127

Explanation:

A /26 has blocks of **64 addresses**.

The subnet beginning at .64 runs:

Network: .64

Usable: .65 – .126

Broadcast: .127

Therefore, the broadcast address is **10.10.5.127**.

Question 3

A network administrator needs **50 usable IPv4 addresses** for a department. What is the smallest subnet that can meet this requirement?

- A. /25
- B. /26
- C. /27
- D. /28

My answer: _____

Correct answer: B. /26

Explanation:

A /26 provides:

$$2^6 = 64$$

total addresses.

Usable addresses:

$$64 - 2 = 62$$

Therefore, /26 provides **62 usable addresses**, which is enough for 50 hosts.

A /27 only provides **30 usable addresses**, so it is too small.

Final Self-Assessment

Area	Result
Mock exam score	_____ %
Strongest topic	_____
Weakest topic	IPv4 Subnetting
Questions answered correctly in practice	___ / 3
Topic requiring more revision	_____
Final preparation action	Review subnetting formulas and practice CIDR questions

Submission checklist:

- 60-minute mock exam completed
- Score screenshot attached
- Every incorrect question analyzed
- One-page weak-area summary prepared
- Five exam strategies listed
- Three new practice questions answered
- Correct answers and explanations checked
